## Micro & Nano Realms...

- Devices or systems, constructed from micro- & nanofabrication, that are used for processing, delivery, manipulation, analysis or construction of biological and chemical materials.
- *Micro* - At least one dimension is from ~100 nm to 200 μm.  
*Nano* - ~0.1 nm to 100 nm
- Incorporating new materials and an understanding of the micro & nano environments, and biocompatibility.
- Harnessing any phenomenon that accomplish work at the micro & nano scale. For example, micro- & nanorobotics include driving, sensing, grasping, loading, releasing, signal transmission, and information processing.
- Includes research and laboratory tools; and point-of-service, therapeutic and implantable devices.

## Microfluidics

- Science of fluid behavior in microchannels.
- In **lab-on-a-chip** and  $\mu$ TAS devices, the following features are often seen:
  - Microchannels,
  - Microfilters,
  - Microvalves,
  - Micropumps,
  - Microneedles,
  - Microreservoirs,
  - Micro-reaction chambers.

---

---

---

---

---

---

---

---

---

## Transport Processes & Electrokinetics...

- Fluid mechanics:
  - Laminar vs turbulent flow,
  - Fluid kinematics.
- Electrokinetic phenomenon:
  - Electroosmosis
  - Electrophoresis
  - Dielectrophoresis

Hossain MR, Dutta D, Islam N, Dutta P. Review: Electric field driven pumping in microfluidic device. *Electrophoresis*. 2018;39(5-6):702-731.

Steven S. Sallerman

---

---

---

---

---

---

---

---

## Micro- & Nanosensors and Actuators.

Sutradhar KB, Sumi CD. Implantable microchip: the futuristic controlled drug delivery system. *Drug Deliv*. 2018;23(1):1-11.

## Nanotransducers...

1. Nanoparticle transducers:
  1. Quantum dots.
  2. Carbon dots.
  3. Nobel metal nanoparticles.
  4. Lanthanide nanoparticles.
2. Label free transducers - rather than relying on attachment to reporter labels for signal transduction:
  1. Nanowires
  2. Nanotubes
  3. Nanocantilevers
  4. Mesoporous membranes.

Hildebrandt N, Spillmann CM, Algar WR, et al. Energy Transfer with Semiconductor Quantum Dot Bioconjugates: A Versatile Platform for Biosensing, Energy Harvesting, and Other Developing Applications. *Chemical Reviews*. 2017;117(2):536-711.

## Micro- & Nanorobotic Classifications

- The composition, structure, size, and biodegradability of micro- and nanorobots.
- The driving mode of micro- and nanorobots (such as magnetic, optical, ultrasonic, chemical reaction, and other different energy forms) and the type of driving source.
- The different functions of micro- and nanorobots, such as treatment, surgery, diagnosis, and medical imaging.
- The diagnosis and treatment of different diseases by different micro- and nanorobots.

Steven S. Sallerman

Maohun, Wan M. *Biomedical micro- and nanorobots in disease treatment*. Wiley-VCH, 2023, p. 14

---

---

---

---

---

---

---

## Example of Propulsion...

### Molecular Engine Powered by H<sup>+</sup> Ions

The flagellum of an E coli cell is a molecular engine powered by the flow of hydrogen ions across the inner membrane. Spinning at an incredible speed, the flagellum here is shown only in slow motion.  
Bacterial Flagellum by Smart Biology

## Other Examples...

- A. Ultrasound-propelled tubular porous drug-loaded gold wire nanorobot for efficient drug loading and release.
- B. Enzyme-based mesoporous nanorobots with NIR optical brakes.
- C. NIR light-driven Janus mesoporous silica nanorobot to promote magnetic resonance imaging.

Steven S. Satterman

## Important

- Mari Hanchi is our Teaching Assistant.
- The class schedule contains recommended reading for each week.
- The midterm and final examination questions will be "essay" style. Your understanding of the material and ability to complete essays questions will be benefitted by the supplemental reading.
- The most successful students have kept their computers off and closed during the lectures, using the time to read the slides, listen to the discussion, and attempting to memorize as much as possible at the time.

Steven S. Satterman

## Team Projects

- **Purpose:** To study further a particular bioMEMS concept or device that you are interested in.
- **Format:** Team presentation of 4 students as a 20-minute Power Point® presentation at the end of the semester. Submitting a paper is not required, although you may wish to distribute a handout. A brief class discussion will follow each talk.
- **Description:** Propose a new bioMEMS device or expand upon a previously published device or useful methodology. Discuss the purpose of your concept, and if appropriate, the theory (what principles are at work), fabrication (materials and techniques), testing, limitations, and biocompatibility of your device.

Steven S. Satterman

---

---

---

---

---

---

---

---

## Projects Continued...

- **Undergraduate Students:** You will want to expand upon concepts presented in class and envision new methods and applications.
- **Graduate Students:** You should take a more technical, mathematical, and modeling approach to your team projects.
- **Everyone:** The course webpage includes updated lists of dozens of current and highly cited articles grouped by areas of interest; and library links to some excellent books.

---

---

---

---

---

## Key Points

- *Have an awareness of the environment and related physics:*
  - *Micro* - At least one dimension is from ~100 nm to 200 μm.
  - *Nano* - ~0.1 nm to 100 nm.
- Explore and understand micro- & nanofabrication, including methods and materials.
- Understand microfluidics, chip-level design, and the incorporation of biological sensors & materials.
- Appreciate the emergence of biomedical robotics.
- Pursue a novel design or application of the techniques learned, as a team project.
