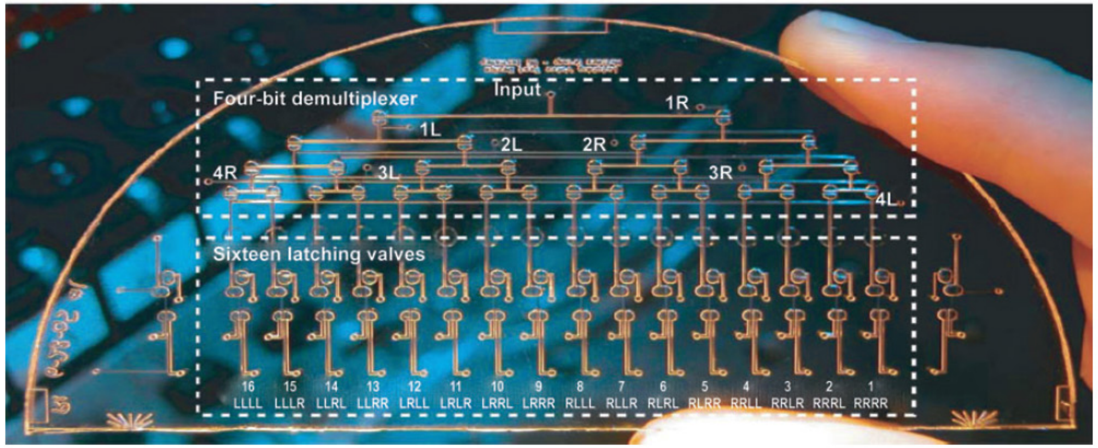
Introduction to BioMEMS & Medical Microdevices, BMEn 5151

Course Introduction

Prof. Steven S. Saliterman, http://saliterman.umn.edu/



Topics

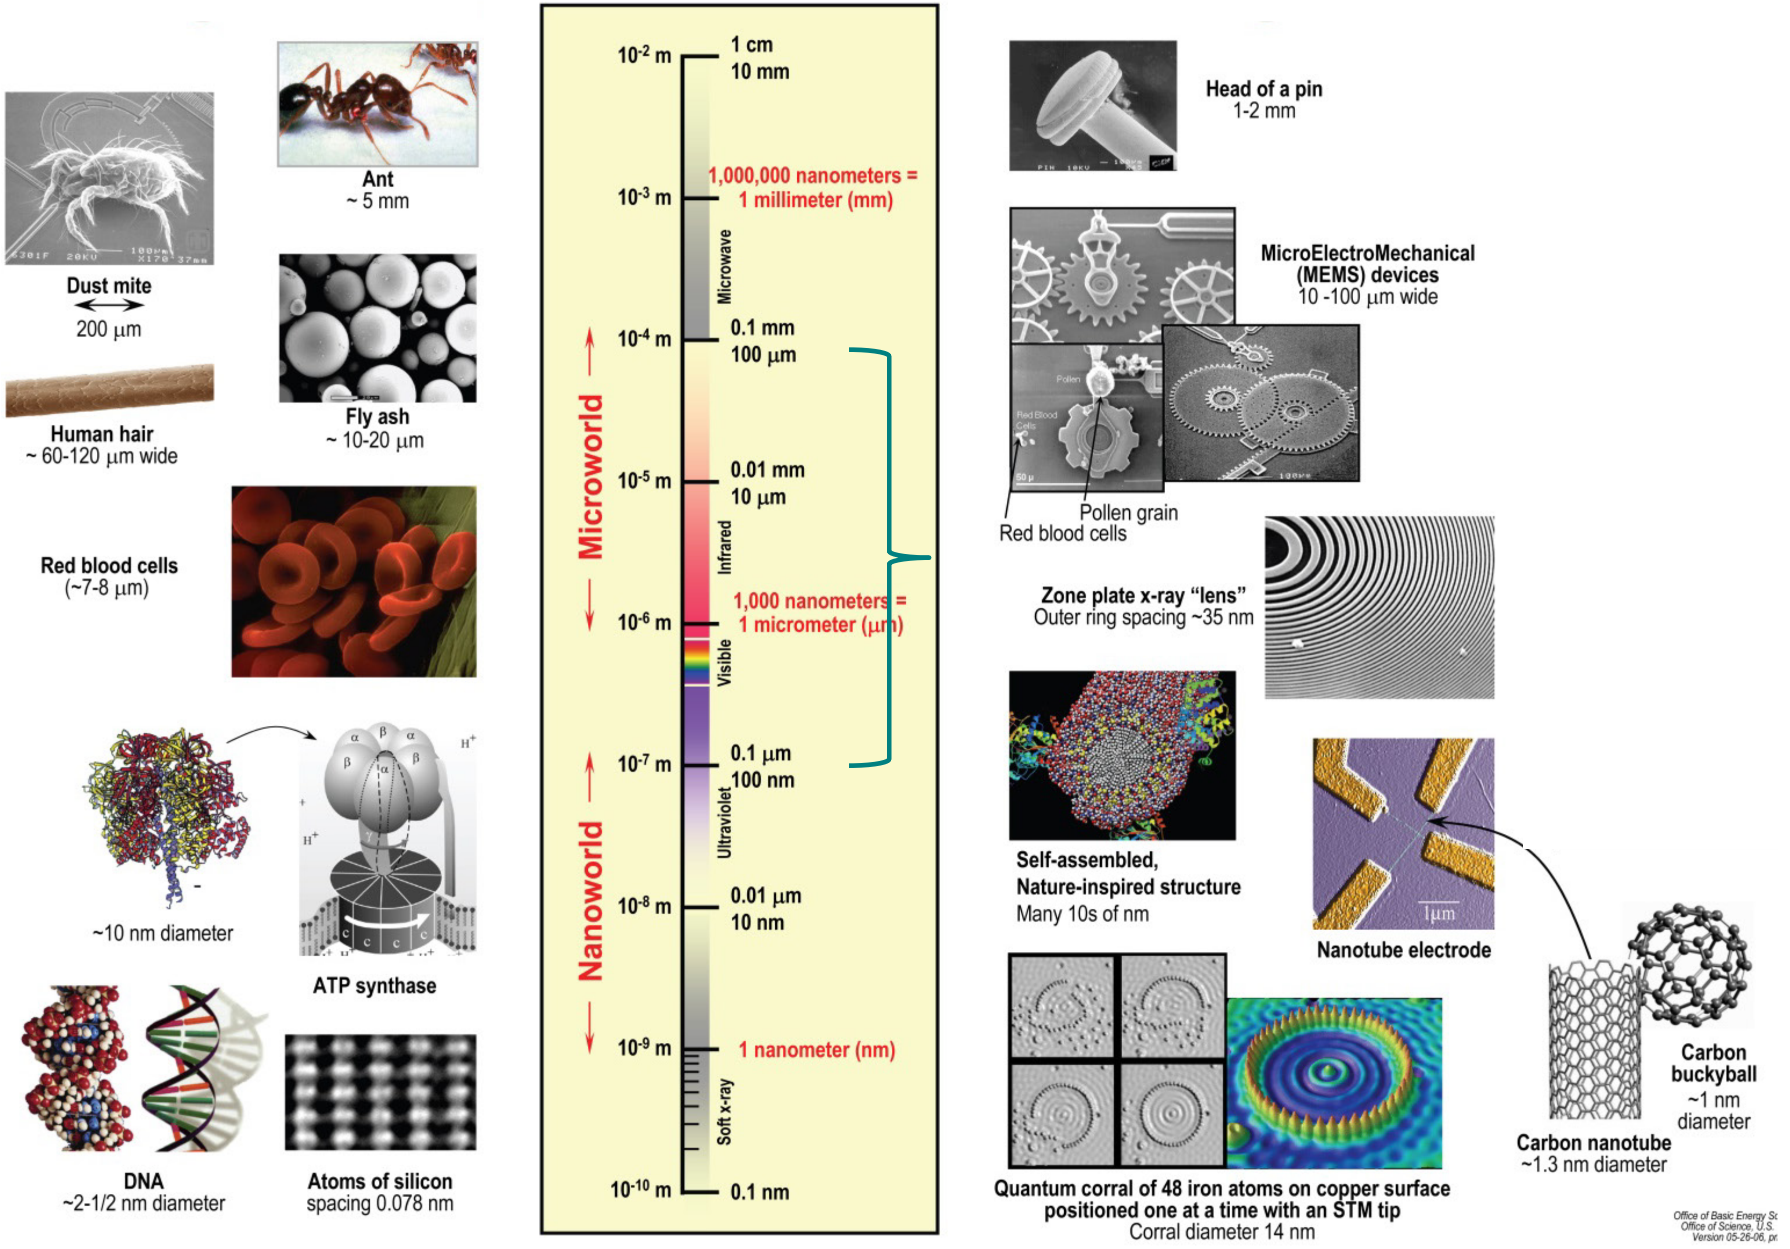
1) Nano- *and* Microfabrication of Silicon & Polymers.
2) Microfluidics - Design, Transport, and Electrokinetics.
3) Biosensors, Microsensors and Nanotechnology.
4) Lab, Organ and Body-on-a-Chip Systems.
5) Microactuators & Drug Delivery.
6) Clinical Laboratory Medicine & Micro Total Analysis Systems.
7) Genomics and Proteomics - Gene and Protein Chips.
8) Clinical Applications & Point-of-Service Devices.
9) Biocompatibility, FDA & ISO 10993.

BioMEMS…

- Biomedical Micro Electro-Mechanical Systems.
- Devices or systems, constructed from nano or microfabrication, that are used for processing, delivery, manipulation, analysis or construction of biological and chemical materials.
- At least one dimension is from ~100 nm to 200 µm.
- Incorporating new materials and an understanding of the nano- microenvironment, and biocompatibility.
- Harnessing any phenomenon that accomplish work at the microscale.
- Includes research and laboratory tools, and point-of-service, therapeutic and implantable devices.

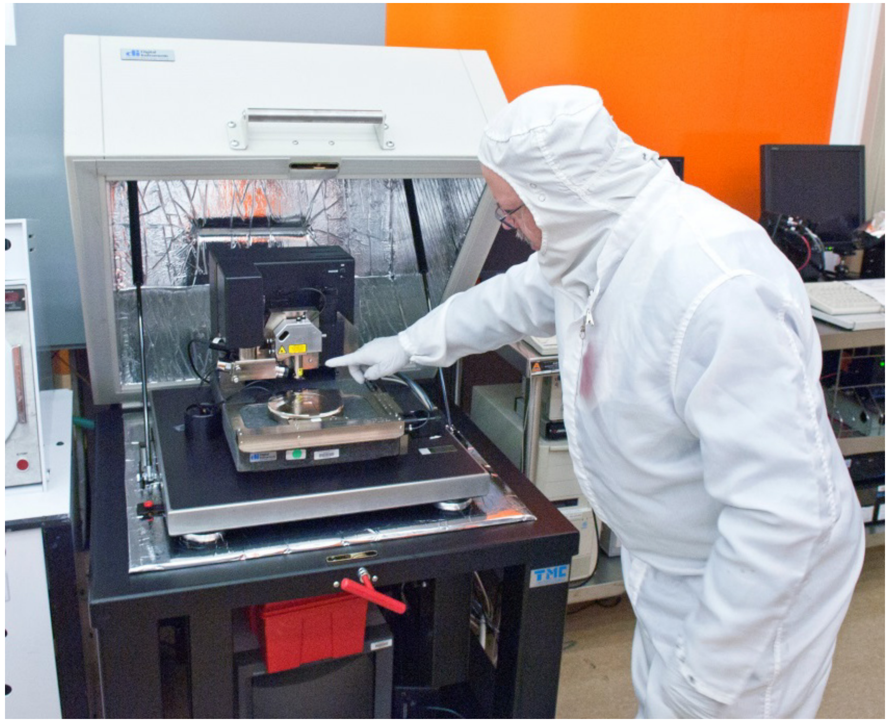
Micro-Nano Realm

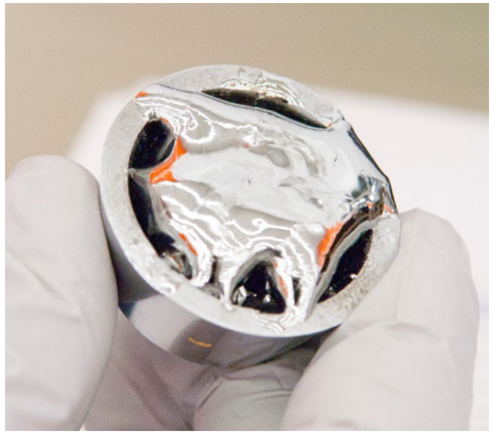
~100 nm to 200 µm
100 nm to 0.078 nm



US Department of Energy, Office of Science 2019

Silicon Nano- and Microfabrication





Steven S. Saliterman

Microfluidics

- Science of fluid behavior in microchannels.
- In lab-on-a-chip and µTAS devices, the following features are often seen:
  - Microchannels,
  - Microfilters,
  - Microvalves,
  - Micropumps,
  - Microneedles,
  - Microreserviors,
  - Micro-reaction chambers.

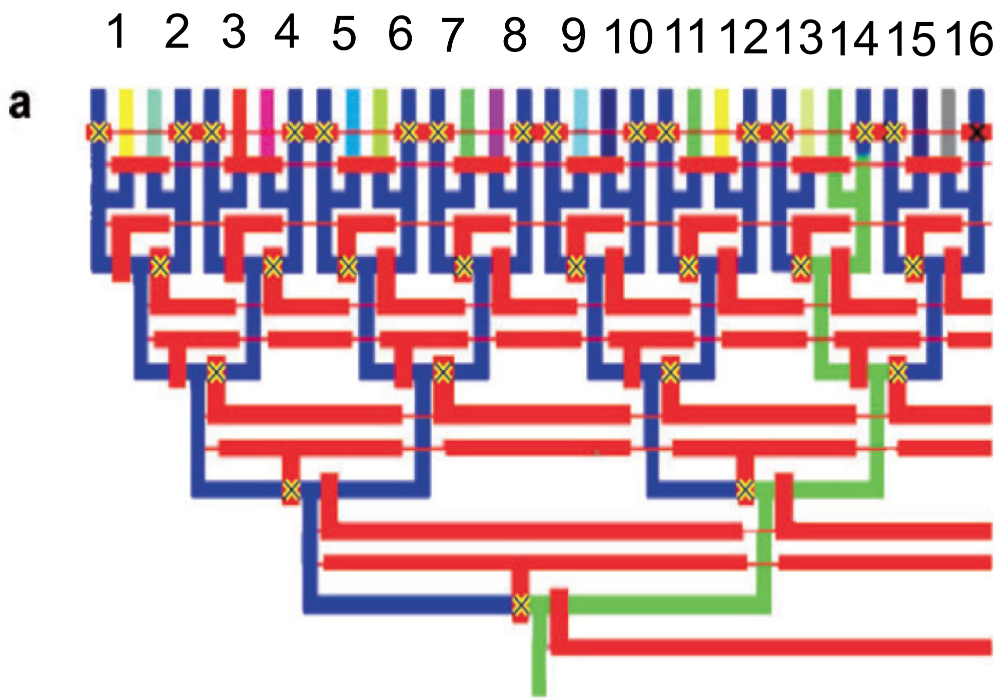
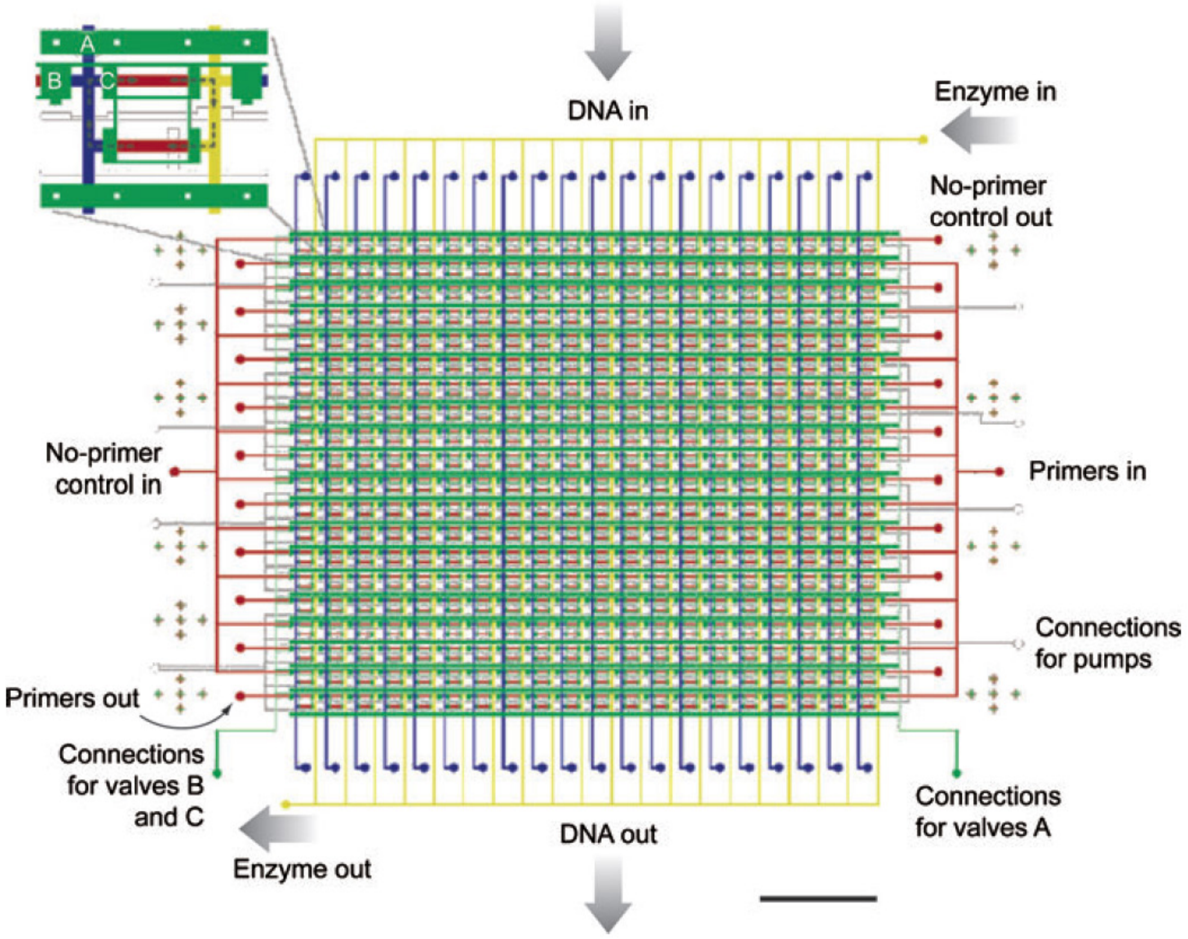
Duffy DC, McDonald JC, Schueller OJA, Whitesides GM. Rapid prototyping of microfluidic systems in poly(dimethylsiloxane). *Analytical Chemistry.* 1998;70(23):4974-4984.

Large-Scale Integration…

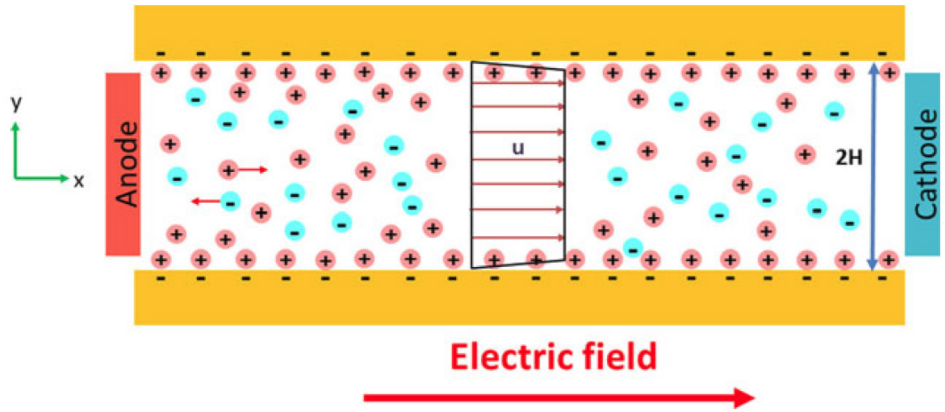




Left) Melin J, Quake SR. Microfluidic large-scale integration: The evolution of design rules for biological automation. In: *Annual Review of Biophysics and Biomolecular Structure.* Vol 36.2007:213-231.
Right) Liu J, Hansen C, Quake SR. 2003. Solving the "world-to-chip" interface problem with a microfluidic matrix. Anal. Chem. 75(18):4718–23

Electrokinetics…

- Electrokinetic phenomenon:
  - Electroosmosis
  - Electrophoresis
  - Dielectrophoresis

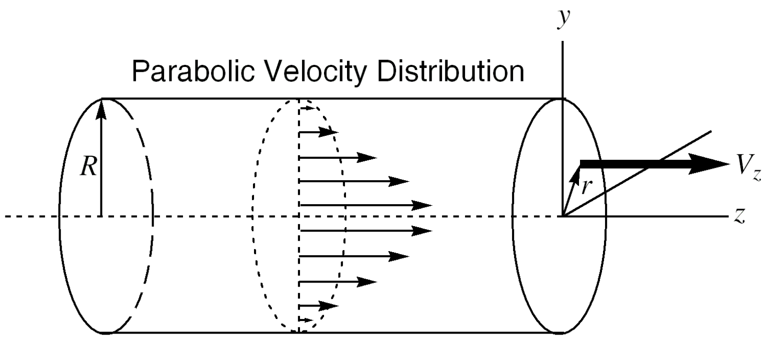


- An important tool for moving, separating and concentrating fluid and suspended particles.

Hossan MR, Dutta D, Islam N, Dutta P. Review: Electric field driven pumping in microfluidic device. *Electrophoresis.* 2018;39(5-6):702-731.

Transport Processes…

- Fluid Mechanics:
  - Laminar vs turbulent flow,
  - Fluid kinematics.



- Mixing by diffusion, special geometries and mechanical means.
- Effects of increased surface area-to-volume as dimensions are reduced in microfluidic channels.

Biosensors & Nanotechnology

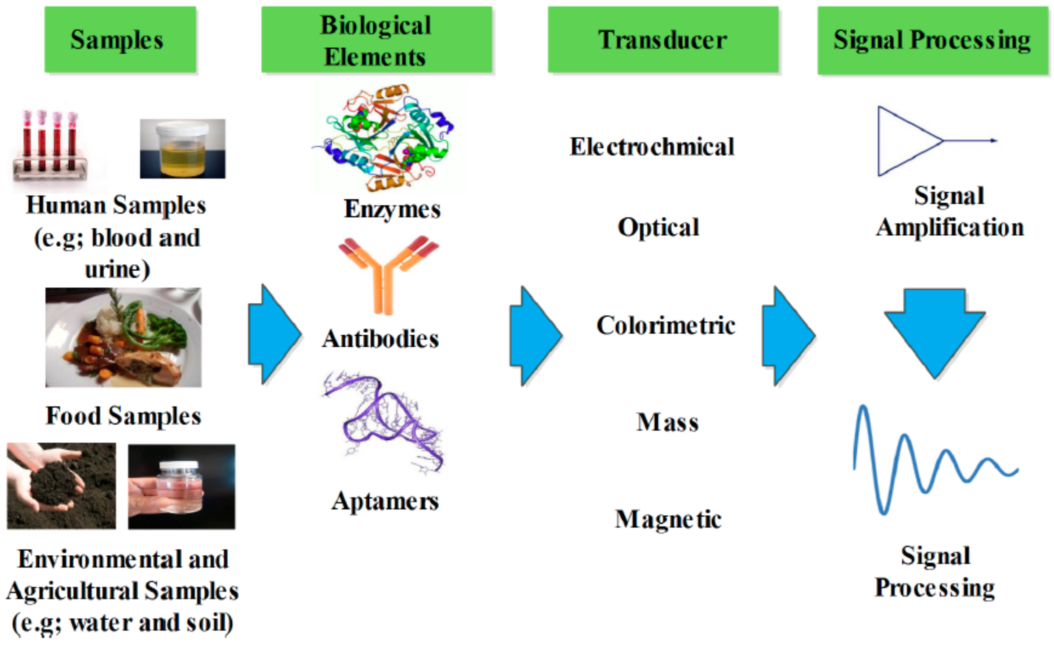


Figure 1. Schematic of different parts of a biosensor including biological recognition elements, transducers, and detectors.

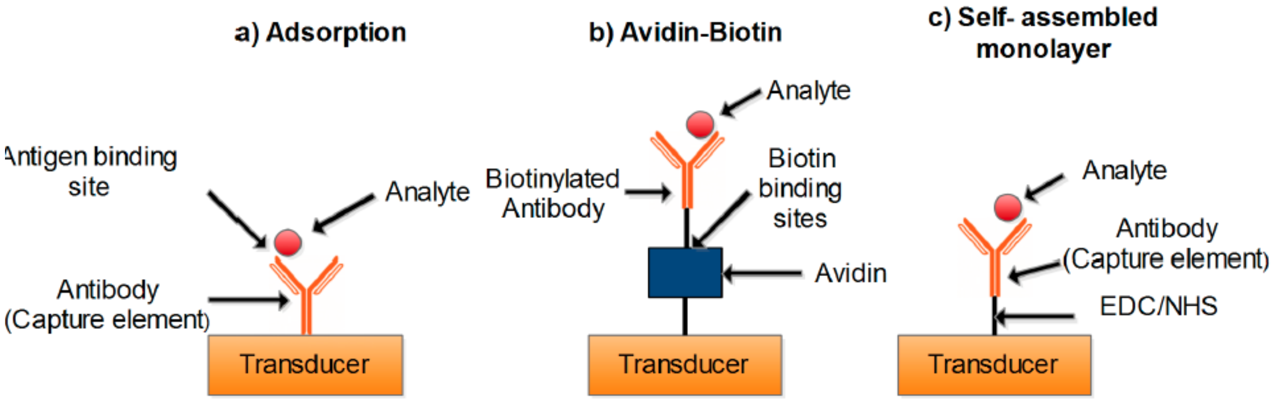

Figure 2. Schematic of the most common and main immobilization methods.

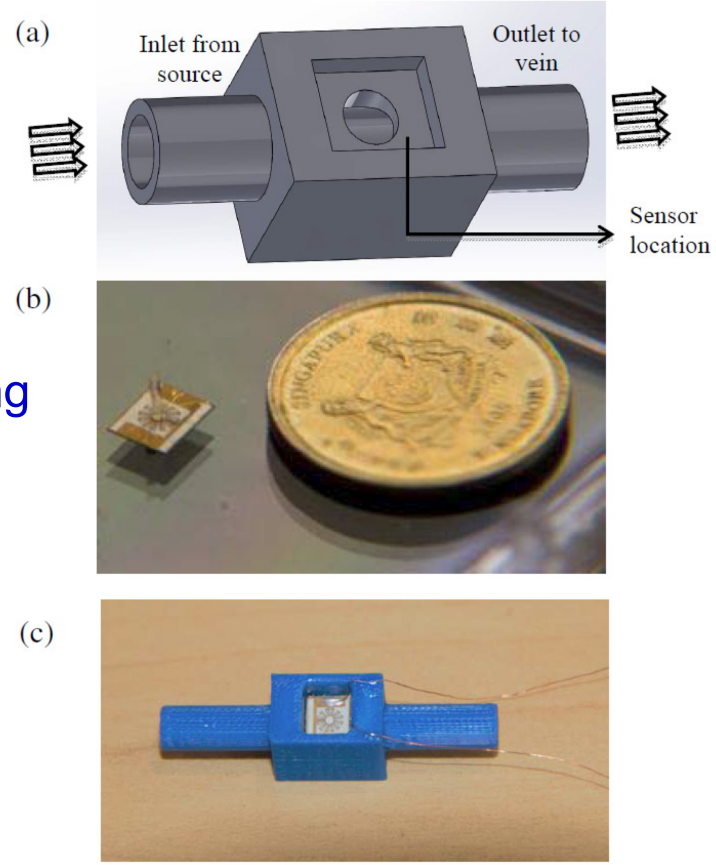
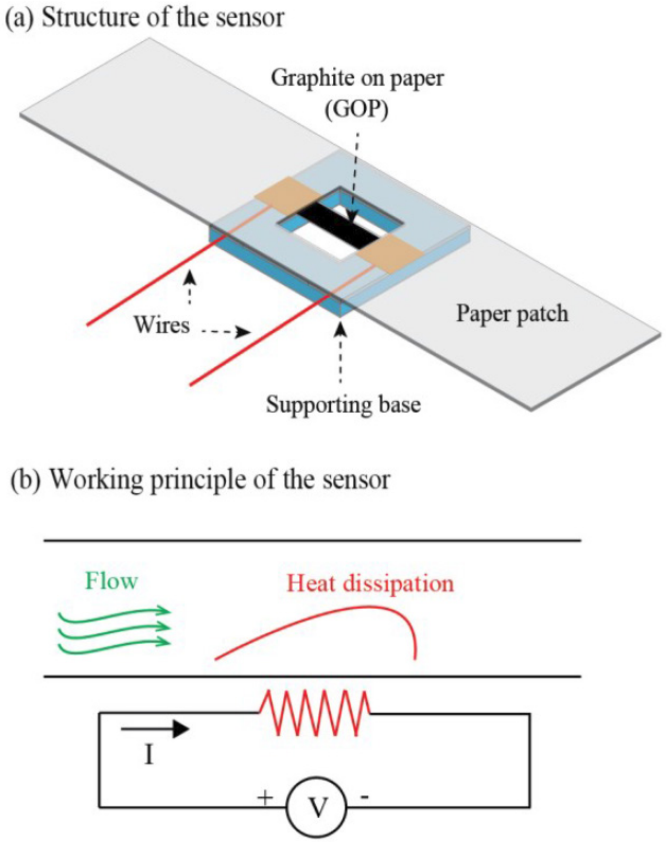
Microsensors…

Flow Monitoring



Kottapalli AGP, Shen Z, Asadnia M, et al. Polymer MEMS sensor for flow monitoring in biomedical device applications. 2017 IEEE 30th International Conference on Micro Electro Mechanical Systems (MEMS); 22-26 Jan. 2017, 2017.

Thermal Flow



Dinh T, Phan H, Qamar A, et al. Environment-friendly wearable thermal flow sensors for noninvasive respiratory monitoring. 2017 IEEE 30th International Conference on Micro Electro Mechanical Systems (MEMS); 22-26 Jan. 2017, 2017.

Nanotransducers…

1. Nanoparticle transducers:
   1. Quantum dots.
   2. Carbon dots.
   3. Nobel metal nanoparticles.
   4. Lanthanide nanoparticles.
2. Label free transducers - rather than relying on attachment to reporter labels for signal transduction:
   1. Nanowires
   2. Nanotubes
   3. Nanocantilevers
   4. Mesoporous membranes.

Team Projects

- Purpose: To study further a particular bioMEMS concept or device that you are interested in.
- Format: Team presentation of 4 students as a 20-minute Power Point® presentation at the end of the semester. Submitting a paper is not required, although you may wish to distribute a handout. A brief class discussion will follow each talk.
- Description: Propose a new bioMEMS device or expand upon a previously published device or useful methodology. Discuss the purpose of your concept, and if appropriate, the theory (what principles are at work), fabrication (materials and techniques), testing, limitations, and biocompatibility of your device.

Examples of Past Projects…

- A BioMEMS Implant to Treat Spinal Cord Injuries
- A Mobile Neurostimulation Electrode
- Assay of Testicular Germ Cell Tumors
- COVID-19 High Throughput Serology Chip
- Detection of the SARS-COV-2 Using SPR
- Heart-on-a-Chip
- Microfluidic Device for Cancer Diagnosis & Monitoring of Metastasis
- Organ-on-a-Chip Model for COVID-19
- Piezoelectric Patch & Pump for Drug Delivery in Tumors
- Quantum Dots for Auditory Brainstem Prosthesis
- Real Time Drug Monitoring Peritoneal Dialysis

Summary

1) Nano- *and* Microfabrication of Silicon & Polymers.
2) Microfluidics - Design, Transport, and Electrokinetics.
3) Biosensors, Microsensors and Nanotechnology.
4) Lab, Organ and Body-on-a-Chip Systems.
5) Microactuators & Drug Delivery.
6) Clinical Laboratory Medicine & Micro Total Analysis Systems.
7) Genomics and Proteomics - Gene and Protein Chips.
8) Clinical Applications & Point-of-Service Devices.
9) Biocompatibility, FDA & ISO 10993.
